

Customer Feedback Intelligence

Decision-support report generated from the current dashboard analysis.

Generated: 2026-09-23 10:26:20

Reviews analyzed: 0

Dataset date range: Not available

Current analysis period: N/A

1. Executive Summary

KPIs match the Executive Intelligence Overview on the dashboard. No additional metrics are introduced here.

Metric	Value
Total reviews	0
Topics discovered	0
Current sentiment	N/A
Negative reviews (latest period)	N/A
Highest issue severity	0.0/100
Feedback change status	Stable
Concept drift score	0.00

2. What Needs Attention?

No customer issue currently requires attention.

3. Customer Sentiment

No sentiment trend data is available.

4. Issue Prioritization

Issues are ranked using the existing severity result (negative sentiment, frequency, growth, and feedback drift). No new severity calculation is performed.

No prioritized issues are available for the latest period.

5. What Changed?

Not enough historical data for drift analysis.

6. Topic Intelligence

No usable topic information is available.

7. Recommended Actions

Recommendations come from the existing rule-based RecommendationEngine. They are not generated by an LLM.

No corrective recommendations are available.

8. Explainable Insights

Text is produced by the existing InsightExplainer.

Sentiment: No sentiment data available.

Topic: No topic trend data available.

Change: Not enough historical data for drift analysis.

Methodology Note

This report is generated from already-computed pipeline results. The download action does not rerun preprocessing, VADER, BERTopic, drift detection, or severity scoring.

Topics are discovered using BERTopic. Sentiment uses VADER compound scores. Topic drift uses cosine similarity on monthly topic distributions. Combined concept drift also incorporates normalized sentiment and volume change using the existing pipeline weights and thresholds. Severity is a relative 0–100 decision-support score. Recommendations are deterministic and rule-based. Results are intended for decision support and are not legal, financial, SLA, or operational risk scores. This system has not been presented here as a production-validated accuracy benchmark.
