

Customer Feedback Intelligence

Decision-support report generated from the current dashboard analysis.

Generated: 2026-09-23 10:26:19

Reviews analyzed: 6

Dataset date range: 2025-10-15 to 2025-12-20

Current analysis period: 2025-12

1. Executive Summary

KPIs match the Executive Intelligence Overview on the dashboard. No additional metrics are introduced here.

Metric	Value
Total reviews	6
Topics discovered	2
Current sentiment	-0.30
Negative reviews (latest period)	100.0%
Highest issue severity	72.5/100
Feedback change status	Elevated Change
Concept drift score	0.41

2. What Needs Attention?

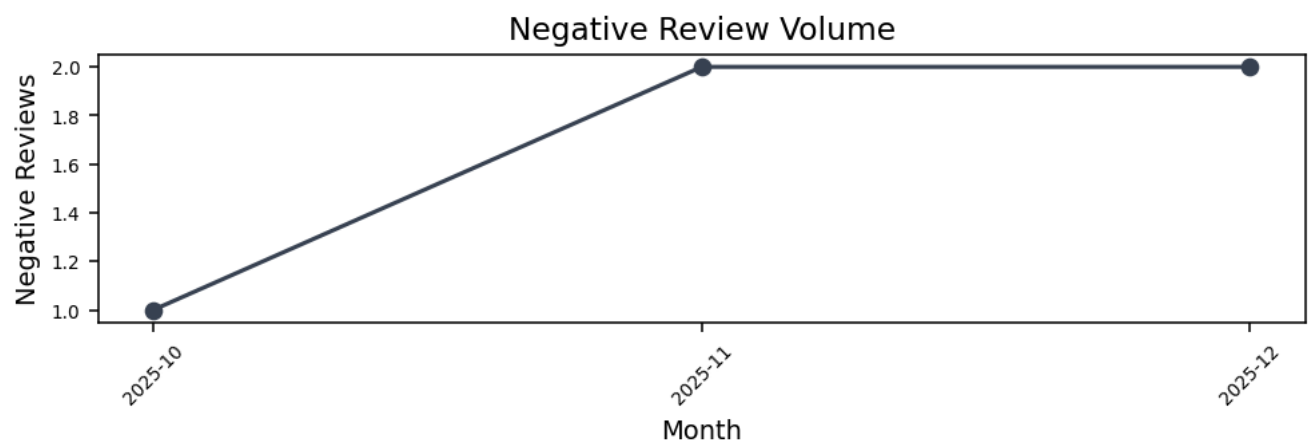

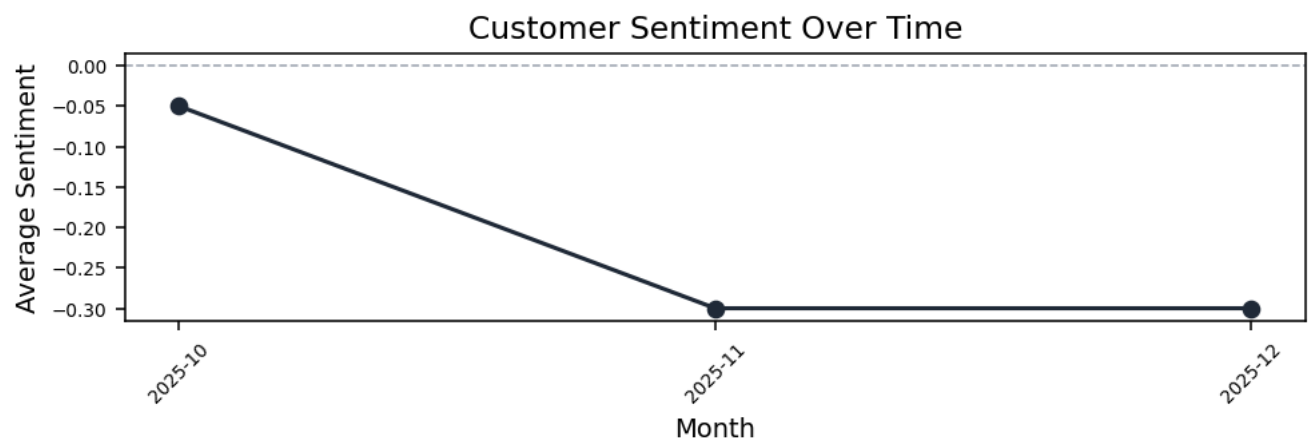

Highest-severity issue from the existing recommendation result: Delivery.

Field	Value
Business topic	Delivery
Severity score	72.5/100
Severity level	High
Frequency	2
Negative ratio	100.0%
Growth rate	60.0%
Concept drift score	0.41

Recommended action: Investigate logistics and delivery partners. Prioritize investigation within the current review cycle.

3. Customer Sentiment

Latest-period average sentiment: -0.30. Negative reviews in the latest period: 100.0%.

Month	Avg sentiment	Negative reviews	Total reviews
2025-10	-0.05	1	2
2025-11	-0.30	2	2
2025-12	-0.30	2	2

4. Issue Prioritization

Issues are ranked using the existing severity result (negative sentiment, frequency, growth, and feedback drift). No new severity calculation is performed.

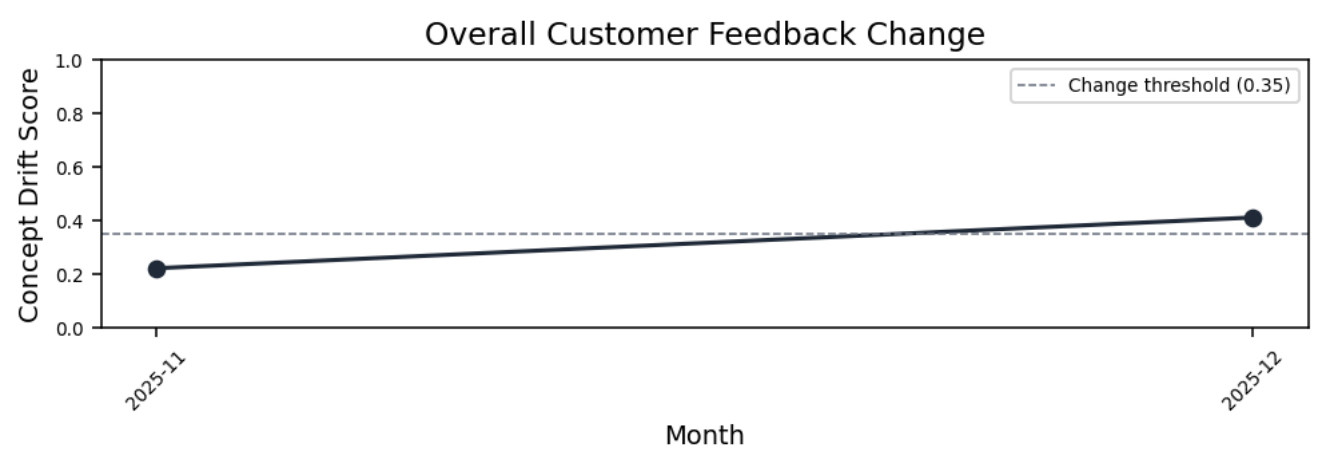

Topic	Severity	Level	Freq.	Neg. ratio	Growth	Drift	Recommendation
Delivery	72.5	High	2	100.0%	60.0%	0.41	Investigate logistics and delivery partners. Prioritize investigation within the current review cycle.
Pricing	40.0	Medium	1	100.0%	10.0%	0.41	Review pricing competitiveness.

5. What Changed?

Existing drift implementation is used without new thresholds. Topic cosine threshold = 0.80. Combined concept-drift alert threshold = 0.35. Dashboard status: Stable < 0.35, Elevated 0.35–0.60, Critical ≥ 0.60.

Field	Value
Feedback change status	Elevated Change
Concept drift score	0.41
Cosine similarity	0.70

Field	Value
Topic change	0.30
Sentiment change	0.60
Volume change	0.20
Previous month	2025-11
Current month	2025-12

Previous month	Current month	Cosine similarity	Concept drift	Alert
2025-10	2025-11	0.92	0.22	No
2025-11	2025-12	0.70	0.41	Yes

Detected drift alerts

- [ALERT] Significant customer feedback drift detected between 2025-11 and 2025-12 (drift score=0.41)

6. Topic Intelligence

Topic statistics for the latest analysis period (2025-12). Concept drift is the existing monthly score for that period; the pipeline does not compute a separate per-topic drift value.

Topic	Frequency	Share	Sentiment	Neg. ratio	Growth	Drift
Delivery	1	50.0%	-0.40	100.0%	20.0%	0.41
Pricing	1	50.0%	-0.20	100.0%	20.0%	0.41

Topic time series already produced by temporal aggregation (truncated if long):

Month	Topic	Frequency	Sentiment	Growth
2025-10	Delivery	1	0.10	20.0%
2025-11	Delivery	1	-0.40	20.0%
2025-12	Delivery	1	-0.40	20.0%
2025-10	Pricing	1	-0.20	20.0%
2025-11	Pricing	1	-0.20	20.0%
2025-12	Pricing	1	-0.20	20.0%

7. Recommended Actions

Recommendations come from the existing rule-based RecommendationEngine. They are not generated by an LLM.

Delivery — 72.5/100 — High

Investigate logistics and delivery partners. Prioritize investigation within the current review cycle.

Pricing — 40.0/100 — Medium

Review pricing competitiveness.

8. Explainable Insights

Text is produced by the existing InsightExplainer.

Sentiment: Customer sentiment is currently negative with an average sentiment score of -0.30.

Topic: The dominant customer discussion topic is 'delivery' with 1 reviews in the latest month.

Change: Topic drift detected. Customer concerns have changed significantly compared to the previous month.

Methodology Note

This report is generated from already-computed pipeline results. The download action does not rerun preprocessing, VADER, BERTopic, drift detection, or severity scoring.

Topics are discovered using BERTopic. Sentiment uses VADER compound scores. Topic drift uses cosine similarity on monthly topic distributions. Combined concept drift also incorporates normalized sentiment and volume change using the existing pipeline weights and thresholds. Severity is a relative 0–100 decision-support score. Recommendations are deterministic and rule-based. Results are intended for decision support and are not legal, financial, SLA, or operational risk scores. This system has not been presented here as a production-validated accuracy benchmark.
